

Smart Classroom Instructions

For Classrooms - P207, 211, 212, 301, 306, 308

Most of the equipment here looks familiar. We have added a ceiling mounted LCD projector and a control interface (pictured below) so you can choose what signal should be sent to the projector. This interface also controls the projector. Please see a sample below.

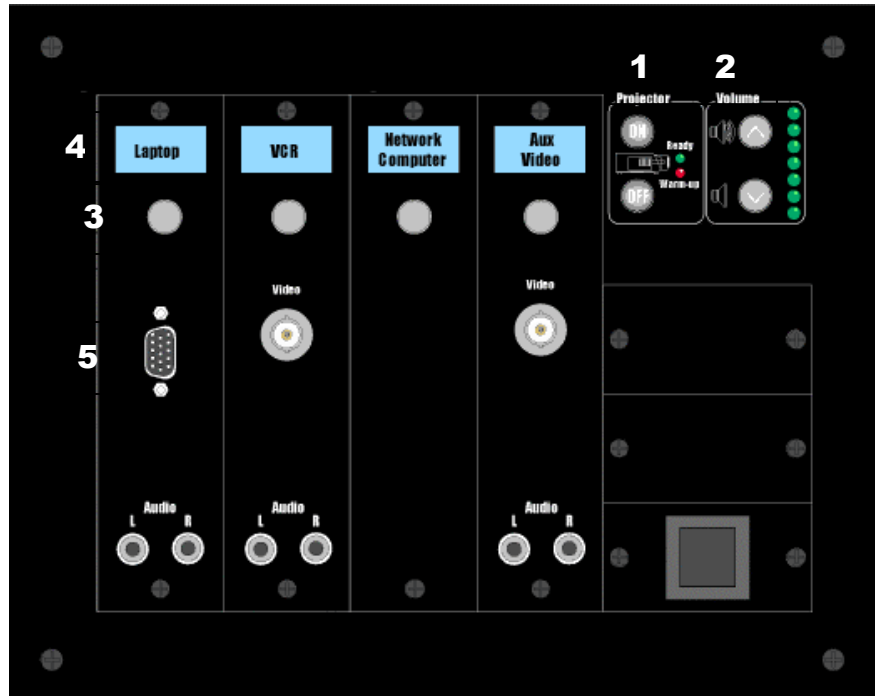

1 - Projector On/Off

2 - Projector Volume

3 - Row of Push Buttons to select source

4 - Labeled Sources
VCR/Laptop/Desk
Computer, etc.

5 - Connectors for rolled in
sources such as a VCR from
IRC

Please note that you have controls at the far right of the interface that turn on (and off) the LCD projector (1), and that also control the volume level (2).

Please also note that the Desk PC is connected, and the new computer CPU has a DVD player you can use. If you request a VCR from IRC, then it can be hooked up directly to the interface under the video switch. Push the VCR button in order to switch the projector to that video source.

There is also a connection for your laptop computer should you decide to bring it and use it in the classroom.
